DATE: MAR 28 1980

SUBJECT: Technical Analysis Document--Increment II

FROM: Robert Courson, Chief  
Technical Support Branch*Paul Boys for*TO: Harold Geren, Chief  
Permits Branch

Enclosed is the technical analysis document for the Increment II project. I do not foresee any major problems related to this determination. The only technical issue may be the lower size cutoff for process heaters for which low NO<sub>x</sub> burners and oxygen or carbon monoxide monitoring is required. Since the company has not responded to us on this question, we made our own technical judgement on the appropriate size cutoff point.

If you have any questions, please call me.

Enclosure
